NRA High Power Competition

Publisher Supplied Information: The NRA High Power Competition game was developed by ISE Games with the help of the NRA Competition Department. This game incorporates all of the actual High Power competition related to military style shooting with exciting game play that has appeal for game players of all ages. The NRA High Power game is fun to play and will appeal to the novice shooter, the accomplished accuracy shooter, and the game player that wants to try their hand at the ultimate in shooting competition. The game can be played against

the comprehensive artificial intelligence mode which will pit the player's individual skills against some of the best competitive shooters in the world, or can be played online for the ultimate challenge.

- A true-to-life simulation of NRA High Power rifle shooting
- Shoot highly detailed civilian versions of 3 military service rifles (M-16, M-14, M-1 Garand)
- Shoot 2 custom High power match rifles
- Shoot "across the course" and long range (up to 1000yds) including Palma and F-Class formats

- Compete with artificial intelligence competitors with skills ranging from Marksman to High Master, or work your way up to the prestigious High master classification in on-line competition against other players.
- Career System. Track your progress toward High master in local competition, state competition, state championship and the national championship. Collect gear, and tune your ammo to your rifle for Ultimate accuracy.
- 3 realistic 100 yard High Power Ranges
- Local 200 yard range for load development
- Sophisticated ballistics modeling and true- to- life reloading (hand loading) systems using the products of top industry suppliers.

This new NRA Sponsored game brings all of the real life fun and competition of one of the most popular forms of competitive shooting in the world. The novice will find this game fun to play and will also be able to access a wealth of educational and training material which can help them to learn the high power shooting sport or increase their overall shooting skills. For the shooting competitor, this game has all of the action and realism of High Power competition. The game player will find serious game- play through-out the game and will find this game to be one of the most challenging electronic games ever encountered. Any one that enjoys guns, shooting, hunting, or simply enjoys challenging game play, will find this new NRA shooting sports game to be one of their favorites.

Serbian and Yugoslav Mauser Rifles by Branko Bogdanovic.

(ISBN 1-882391-35-7)

Publisher Supplied Information: Few realize it but an obscure little Balkan country which had recently gained its independence from the Ottoman Empire, played a profound role in the development of the Mauser rifle. Serbia's purchase of the Model 1871 rifle came just in time to save the Mauser company from bankruptcy. It became the Serbian Model 1880. Among other innovations for which Serbian designers were responsible was the famous "ring-of-steel" which provided complete support for the cartridge base, and which was introduced into the Gew.M1898 rifle in 1905. Serbia, later renamed Yugoslavia, also helped develop the "intermediate-ring" Mauser action.

Yugoslav Mausers - Models 1924-52C (C with an breve --"v" diacritical mark), Model 24/47 and Model 1948 - are prized collectors items. Mr. Bogdanovic's book is the first in English to provide a complete discussion of these, and every other "Yugoslav" Mauser rifles from 1880 to the present, including all sniper rifles, hunting and target rifles and .22 sporting rifles. In Serbian and Yugoslav Mauser Rifles, each model is discussed in its own chapter. All serial numbers are presented by year. All markings are presented and

translated and all finishes and changes to all models are described in text and charts and well illustrated with both photographs and excellent drawings for clarity.

These are the rifles that proved so deadly to the Nazi occupiers in World War II in the hands of the famous Yugoslav "partisans."

Branko Bogdanovic is a well-known European gunwriter and has written several books on firearms as well as dozens of magazine articles. He is also a writer and researcher for the Zastava Arms Factory in Kragujevac, Serbia; a member of the Advisory Board of the National Military Museum, Belgrade, Serbia; and a researcher for the Ministry of the Interior.
